1. Unlock cabinet where the Wolfvision document camera is stored and pull it all the way out.

2. Press the ON button, located in the lower right corner of the document camera. The mirror arm will automatically rise. Do not touch the arm and mirror while it is rising.

3. Touch Doc Cam on the touch screen control panel.

Your Wolfvision Document Camera is now ready to use!
**Wolfvision-57 Document Camera Controls**

**Mirror:** Push the Mirror Up or Mirror Down arrow keys to rotate the mirror. This will move the displayed area up or down. Please do not rotate the mirror manually- use the Mirror buttons.

**Zoom:** Push the button to zoom in (make the image larger, less displayed)

Push the button to zoom out (make the image smaller, more displayed)

**Presets:** Push and hold any one of the 3 Preset buttons for 5 seconds (until it displays Selection Stored) to store the current zoom, focus, and iris settings as a preset. Press the Preset buttons to recall that preset.

**Turn:** Push this button to rotate the image 90 degrees. This is useful for displaying documents that won’t fit on the work surface, or want to display more information.

**Text:** This will enhance the contrast, which will make text appear crisper. Use this if your text is not displaying well.

**Image:** This will make the document camera display black. Similar to the Picture Mute button on the touch screen.

**Macro:** If you wish to display a minute detail of an object, and you cannot zoom in far enough. Push Macro, and the mirror arm will move down, to allow you to zoom in farther.

**Focus:** Push either of these buttons to manually adjust the focus. If the focus does not improve, push the other Focus button until the focus improves.

**Light:** Pushing this button will toggle through the light settings: Upper light on, Lower light on, No light on. A red laser dot will indicate the center of your display area.

**Iris:** Push the button to iris down, or make the image darker. Push the button to iris up, or make the image brighter.
This document camera has a wireless Infrared remote control, located at the back left side of the doc cam. Pointing it at the document camera, you can remotely do many of the same functions as the control panel, with the addition of:

**Memory:** Push and hold any one of the 9 Memory buttons for 5 seconds (until it displays Selection Stored) to store the current image in a memory preset. Press any one of the 9 Preset buttons to recall that preset. NOTE: Memory images will be erased when the doc cam is turned off.

**All:** Push to display thumbnails of all 9 stored memory images on the screen at the same time.

You can control the zoom and focus, and recall or save presets from the touch screen.
